AMENDMENTS TO THE CLAIMS

The following is a complete, marked up listing of revised claims with a status identifier in parentheses, underlined text indicating insertions, and strikethrough and/or double brackets indicating deletions.

LISTING OF CLAIMS

1. (Currently Amended) A method of estimating a signal-to-<u>interference+</u>noise ratio (SINR), comprising:

estimating polarities of a plurality of received data symbol samples; and

generating an SINR estimate based on the plurality of received data symbol samples

and the estimated polarities of the plurality of received data symbol samples such that the

SINR estimate is not dependent only on the polarities of the plurality of received data symbol

samples.

2. (Original) The method of claim 1, wherein the generating step multiplies each of the

plurality of received data symbol sample by an associated estimated polarity, and generates

the SINR estimate using the multiplication results as data symbol samples in an SINR

estimation algorithm.

3. (Currently Amended) A method of estimating a signal-to-interference+noise ratio

(SINR), comprising:

estimating bit values of a plurality of received data symbol samples; and

generating an SINR estimate based on the plurality of received data symbol samples

and the estimated bit values of the plurality of received data symbol samples such that the

SINR estimate is not dependent only on a bit value of the plurality of received data symbol

samples.

4. (Original) The method of claim 1, wherein the generating step multiplies each of the

plurality of received data symbol sample by an associated estimated bit value, and generates

the SINR estimate using the multiplication results as data symbol samples in an SINR

estimation algorithm.

5. (Currently Amended) A method of estimating a signal-to-interference+noise ratio

(SINR), comprising:

estimating polarities of a plurality of received data symbol samples;

converting the received data symbol samples into quasi-pilot symbol samples based

on the estimated polarities; and

generating an SINR estimate based on the quasi-pilot symbol samples
